# Undergraduate Kaggle Submission

I have the random forest but am struggling to obtain the actual predictions and the out-of-bag cross validation error. When I try to predict there is an error that says `Type of predictors in new data do not match that of the training data.`, and I can't find the cross validation error in the random forest output.

Also, are we supposed to submit our final predictions to the Kaggle contest or is that optional?

**the students' answer**, where students collectively construct a single answer

Actions ▾

If you use `print(model)` it should give you an OOB error without needing to make any predictions
