Hw 2 Question 3

I have two questions.

First, in ggplot, how do you get the white lines between your bins like in the PowerPoint?

Second, anyone know why I'm getting this error when I try to move the plot from script to markdown? Code worked fine in script.

You need to install the library ggplot2 in your markdown file

Okay how exactly do I do that? I thought I installed it already, it's working when I run it in my script file, and ggplot2 is showing up in packages.

Did installing `ggplot2` fix the error for you? I had the same error but installing `ggplot2` did not fix it for me.
